Objectives & main programme points

- Streetlight-EPC project.
- EPC contracting and different possible schemes.
- Best solution and services using LED and advanced control systems for LED
- Financing options and EPC contracting conditions.
- Cooperation with ADESGAM, Escan and the Municipalities.

Summary

In order to gather main actors involved in public lighting and show the different opportunities available, the energy consultancy Escan organized this bilateral meeting, with the aim to introduce the Streetlight-EPC project and the possibility to provide advising to the Municipalities represented by ADESGAM.

It was explained the advice to be provided, as the opportunity to receive a free checking of the options to renovate their streetlight by new efficient luminaires and lighting systems, to help them in preparing the business cases for specific streetlight renovations and the support during EPC contract preparation.

These municipalities are small and medium size, and in general with still low good quality information on how the streetlight can be deeply renovated by modern efficient systems without increasing the Municipal debt.

The LED luminaires were explained as a very efficient option, but it was mentioned that

also the LED with point-to-point control system would increase even more the efficiency and costs reduction.

Some questions arose on how to continue the cooperation and the next steps to find the right Municipalities interested in stating to receive advising on streetlight renovation with EPC contracting.

AGENDA/PROGRAMME

- Francisco Puente presents the Streetlight-EPC project and points out the main objectives and activities to be carried out.
