

## **EVENT DESCRIPTION**

### **Project Partner: REGEA**

**Title of the event: Training workshop for street lighting energy auditors**

**Date:** 24.05.2016

**Organiser(s):** REGEA

**Number of Participants:** 25

### **Summary**

Methodology for energy audits of street lighting system, developed within Streetlight-EPC project, was explained in details to the street lighting energy auditors that are going to use it for the future energy audits.

### **Objectives & main programme points**

After short introduction and presentation of Streetlight-EPC project, methodology developed and presented within Streetlight-EPC project (work group meeting on 1th April 2015) was presented to the energy auditors authorized by the relevant Ministry. Energy auditors were informed about the methodology, recommended about the process of data collecting and educated regarding the methodology specificities. List of the streetlight element types (manufacturer and type) with pictures was updated with the auditors input with overall over 150 luminaire types, control systems, cables, and poles with pictures and technical data. REGEA also collected recommendations of the auditors that were given during the discussion that was held after the presentation.

### **Conclusions & lessons learnt (based on stakeholder input)**

Energy auditors welcomed the methodology for energy audits of street lighting system and agreed that document like that is necessary on the national level in order to uniform the process of auditing the street lighting and make it more transparent in that way.
